Education

Escuela Superior de Cómputo – IPN Expected Jan 2027
Bachelor of Science in Artificial Intelligence Engineering *Mexico City*
Relevant Coursework: Data Structures & Algorithms, Relational Databases, Object-Oriented Programming, Machine Learning, Operating Systems

CECyT No. 8 "Narciso Bassols" – IPN 2018 – 2021
Associate's Degree in Industrial Technology/Technician *Mexico City*

Technical Skills

Languages: Python, C, Java, SQL, Bash, Lua
Backend & Databases: Django, Django REST Framework (DRF), PostgreSQL, SQLite, RESTful APIs, ORM
AI & Machine Learning: Scikit-learn, Keras, NumPy, Pandas, Jupyter Notebooks, Prompt Engineering
Developer Tools & Platforms: Git, GitHub Actions (CI/CD), Docker, Linux/Unix, Azure, Postman, Unity
Core Competencies: MVC/MVT Architecture, Relational Database Modeling, Asynchronous Programming, CRUD Systems

Certifications

- **Artificial Intelligence:** Google AI Essentials | AI Fundamentals (IBM SkillsBuild) | Artificial Intelligence Fundamentals | Introduction to Modern AI
- **Cybersecurity & Systems:** **Google Cybersecurity Professional Certificate** | IT Support Specialist Career Path | Introduction to C
- **Software Development:** Python Essentials 1 & Python Essentials 2 | HTML Essentials

Projects

Virtual Assistant & ERP for Microenterprises | *Django, PostgreSQL, SQLite, REST API, Python* Feb 2026 – Present

- Architecting a modular backend using **Django** and **Django REST Framework** to automate inventory tracking, product cataloging, and daily sales recording for local microenterprises.
- Designed and implemented a relational database schema in **PostgreSQL** (leveraging **SQLite** for rapid local prototyping), enforcing ACID transactions, data normalization, and foreign-key integrity across sales ledgers.
- Built optimized ORM queries utilizing `select_related` and indexing to eliminate $N+1$ query overhead, achieving deterministic, sub-100ms API response times.
- Formulated an intuitive, rule-based backend routing system for transaction management, reducing latency and operational friction compared to heavy natural language workflows.

AI-Powered Multi-Service Discord Bot | *Python, Asyncio, SQLite, REST APIs, OpenRouter* 2025

- Engineered an asynchronous bot leveraging Python's `asyncio` and third-party RESTful APIs, providing real-time weather analytics via OpenWeather and dynamic LLM inference via OpenRouter.
- Integrated a lightweight **SQLite** persistence layer to cache user interaction histories, manage session states, and prevent redundant external API calls.
- Implemented robust exception handling, token management, and JSON payload deserialization to uphold high server responsiveness and mitigate third-party rate limits.

Scalable RESTful API & CRUD Data Engine | *Python, Django, PostgreSQL, Docker, Postman* 2025 – 2026

- Developed and documented production-grade CRUD endpoints following standard REST principles, implementing token-based authentication and role-based permissions.
- Containerized application services using **Docker** to standardize development-to-production parity between Django and PostgreSQL instances.
- Conducted extensive endpoint validation and stress testing via Postman collections, ensuring zero payload corruption under concurrent simulated requests.

Experience

IT Systems Support Specialist (Social Service) Apr 2025 – Sep 2025
Instituto Politécnico Nacional *Mexico City, Hybrid*

- Provided tier-1 and tier-2 technical operations support across hybrid campus infrastructure, troubleshooting software dependencies, local network configurations, and OS-level issues.

- Developed custom Bash automation scripts to streamline routine workstation setup and recurring maintenance tasks, cutting down manual configuration time by an estimated 30%.
- Authored technical walkthroughs and troubleshooting guidelines, enabling non-technical faculty to independently resolve recurring configuration issues.
- Performed quality assurance on educational digital databases and multimedia repositories, validating course metadata and data integrity.
